## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1, 3, 7 and 9 are rejected under 35 U.S.C. 102(e) as being anticipated by Gadbois et al. (US Patent Application Publication 2004/0002955 A1) ('Gadbois').

With respect to claims 1 and 7, Gadbois teaches:

providing a Web Services Directory (paragraph 5 lines 14-25, paragraph 21 lines 1-6) having object classes and attributes (Figure 2, paragraph 26); and  
defining attributes of a specific type (paragraph 27 lines 7-12) which correspond to a specific object class (paragraph 27 lines 5-6).

As shown in Figure 2, one object class is organizations and the corresponding attribute shown (elements 222 and 224) is organization name, having values Organization1 and Organization2.

With respect to claims 3 and 9, Gadbois teaches wherein the specific object class relates to at least one of keyed references, names and classes (paragraph 38, paragraph 64).

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 2, 4-6, 8 and 10-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gadbois et al. (US Patent Application Publication 2004/0002955 A1) ('Gadbois') in view of Srinivasan et al. (US Patent 6,834,286 B2) ('Srinivasan').

With respect to claims 2 and 8, Gadbois teaches claims 1 and 7.

Gadbois does not explicitly teach wherein the object classes are a subclass of an abstract object class.

Srinivasan teaches a method and system for representing and accessing object-oriented data in a relational database system (see abstract), in which he teaches wherein the object classes are a subclass of an abstract object class (column 14 lines 18-36).

It would have been obvious to a person having ordinary skill in the art at the time the invention was made to have modified Gadbois by the teaching of Srinivasan

Art Unit: 2164

because wherein the object classes are a subclass of an abstract object class would enable an improved method and system for storing and maintaining object-oriented data in an RDBMS, more particularly for storing and maintaining directory information objects, such as LDAP data, in an RDBMS (Srinivasan, column 4 lines 25-31).

With respect to claims 4 and 10, Gadbois as modified teaches wherein the object class is an auxiliary object class (Srinivasan, column 15 lines 15-21).

With respect to claims 5 and 11, Gadbois as modified teaches wherein the auxiliary object class is a Publisher Assertion Keyed Reference (Gadbois, paragraphs 38-39, paragraph 47, paragraph 64).

With respect to claims 6 and 12, Gadbois as modified teaches further comprising providing specific attributes which relate to one object class for a purpose of enhancing searching (Srinivasan, column 9 lines 1-11).
